SUMMARY OF SELECTED WATER-QUALITY DATA  
FOR THE WARRIOR COAL FIELD, ALABAMA

By Will S. Mooty

ABSTRACT

This report provides a summary of selected water-quality data collected from 1976 to 1984 at 75 surface water sites and 28 test wells in the Warrior coal field in northwestern Alabama. The minimum, maximum, mean or median, standard deviation, and number of determinations are given for each site for discharge, pH, alkalinity, specific conductance, hardness, dissolved and suspended solids, sulfate, total and dissolved iron and manganese. Twelve quadrangles are included in the report showing the location of each site.

## INTRODUCTION

The U.S. Geological Survey, Water Resources Division, in cooperation with the U.S. Bureau of Land Management (BLM), began data collection in 1976 to define the hydrology of selected areas of the Warrior coal field of the Southern Appalachian coal region. The information gathered through this study is used by the BLM in the preparation of environmental impact statements and in other coal leasing actions. This report provides a summary of selected water-quality data collected from 1976 to 1984 at 75 surface water sites and 28 test wells located in the Warrior coal field in northwestern Alabama. These sites were selected to cover the range of geological conditions found in the Warrior coal field, for example, Coker and Pottsville formations, unmined basins, actively mined basins, and basins with reclaimed mines. The sites included in the report are those funded by the BLM as part of a cooperative project to study the effects of mining.

The purpose of this report is to present a statistical summary of the more important water-quality properties and constituents impacted by mining. However, hydrological, biological, and other water-quality data collected for these sites as part of the BLM project plus data for many additional sites in the Warrior coal field from other projects are on file in the Survey's computer system. These data are available on request from the Survey by (1) a polygon retrieval where the latitude and longitude coordinants for the area in question are given and data for all sites located within that area are retrieved or (2) a site specific retrieval if the station number for the site is known. These procedures have been used in the past by the BLM in cooperation with the Survey to obtain data about an area that is under study.

Table 1.--List of quadrangles included in study area

---

QUADRANGLE NAME	QUADRANGLE NUMBER
Lake Nicol	163-B
Windham Springs	163-D
Lake Tuscaloosa North	164-C
Wiley	176-B
Oakman	176-D
Berry SE	177-A
New Lexington	177-B
Berry	177-C
Arkadelphia	187-D
Cold Springs	188-C
Howard	190-A
Carbon Hill	190-C

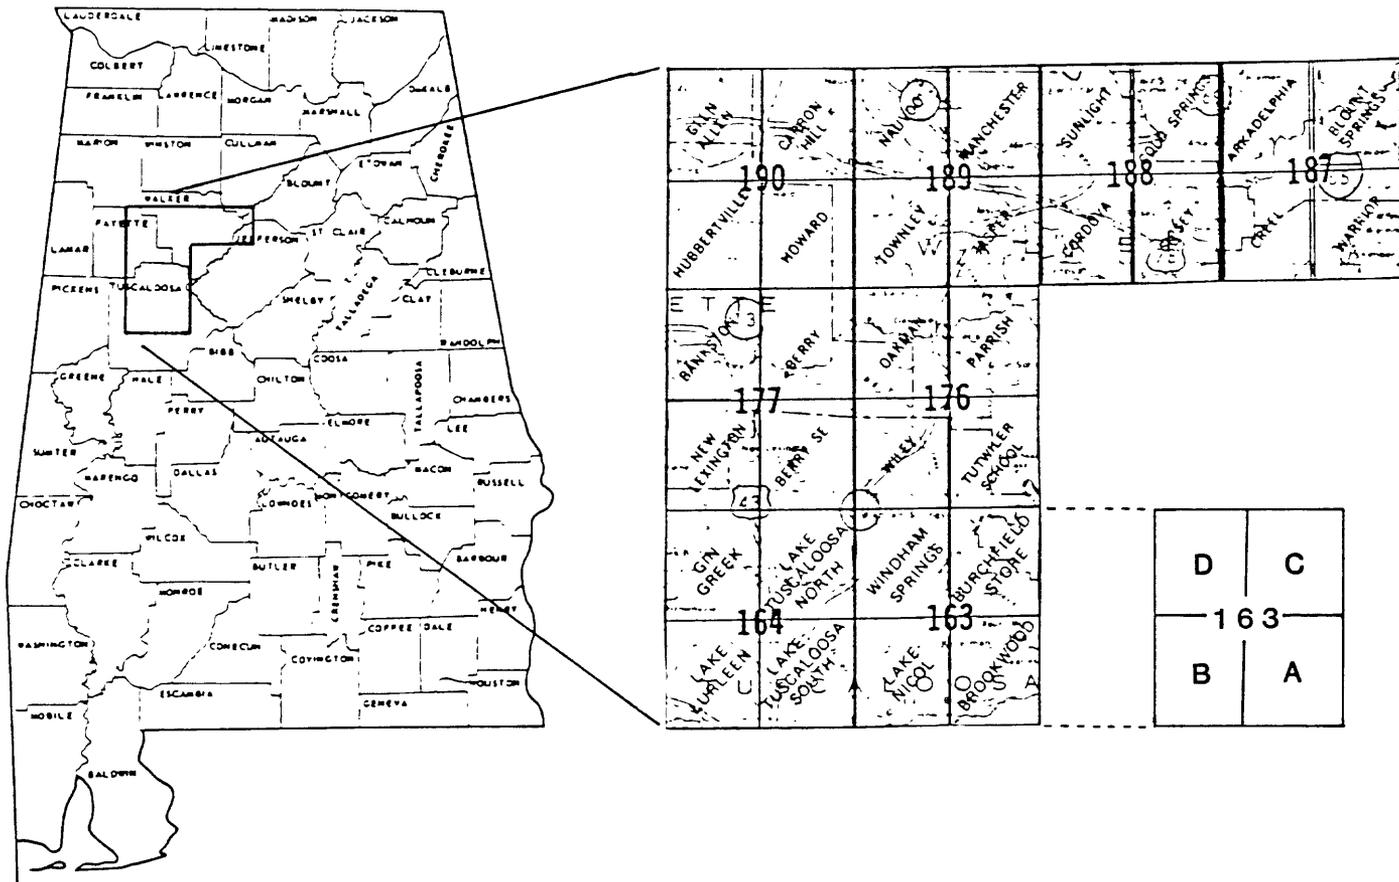

Figure 1.--Project study area in Alabama with quadrangle names and indexing system.

## NOTES ABOUT THE DATA

Table 1 lists the name, number, and letter of each quadrangle included in this report. Figure 1 shows the location of the study area and the numbering and lettering system for the quadrangles developed by the Survey. Quadrangles showing the location of each site are included in this report.

The surface water sites are listed first for each quadrangle. The name of each site is given along with the 8- to 10-digit downstream order number as assigned by the Survey. One exception is Tyro Creek near Boley Springs, Ala., site no. 9 in the Berry SE quadrangle. Instead of a downstream order number, the latitude and longitude for the site is given.

Test wells for each quadrangle are arranged in order of their test well number. However, the number assigned to each well for map identification does not correspond to its original test well number (for example, Windham Springs quadrangle, test well 30 is reassigned no. 12). The latitude and longitude for each well is given after the test well number and its local name, if available.

Table 2 is a list of the symbols used to identify each type of site on the maps presented. Rain gage sites are labeled on the maps, but data from the rain gages are not included with this report. Data may be obtained by request from the Survey.

Summaries of the water-quality data are presented in tables 3 to 14. The minimum, maximum, mean or median, standard deviation, and number of determinations are given for discharge, pH, alkalinity, specific conductance, hardness, dissolved and suspended solids, sulfate, total and dissolved iron and manganese. The data are arranged by quadrangle according to numerical and alphabetical order. The value for "mean" pH is actually the median value due to pH being a logarithmic value. All values have been rounded to two decimal places.

Explanation of abbreviations:

mi<sup>2</sup> = square miles

ft<sup>3</sup>/s = cubic feet per second

ug/L = micrograms per liter

mg/L = milligrams per liter

uS/cm = microsiemens per centimeter at 25° Celsius

acre-ft = acre-feet

N = number of times each parameter was measured

Table 2.--Explanation of map symbols

GAGING STATIONS

Basic shape is a triangle— $\Delta$

DESCRIPTION	SYMBOL
Continuous-record gaging station	
Measurement site without a gage	
Discontinued gaging station	

QUALITY-OF-WATER SITES

Basic shape is an inverted triangle— $\nabla$

Discontinued gaging station and quality-of-water site with number

DESCRIPTION	SYMBOL	SYMBOL WITH BASIC SHAPE
Chemical-measurement site		
Temperature-measurement site		
Biological-measurement site		
Sediment-measurement site		
Inactive site		

WATER WELLS

Basic shape is a circle— $\bigcirc$

Observation well and number

DESCRIPTION	SYMBOL	SYMBOL WITH BASIC SHAPE
Observation well		
Observation well equipped with a recorder		

WEATHER STATIONS

Basic shape is a diamond divided into four parts— $\diamond$

Discontinued precipitation station and name

DESCRIPTION	SYMBOL	SYMBOL WITH BASIC SHAPE
Weather station equipped with a recorder		
Weather stations where the following types of measurements are obtained:		
Precipitation		
Temperature		
Humidity		
Wind velocity		
Discontinued weather station		

Federal mineral ownership boundaries

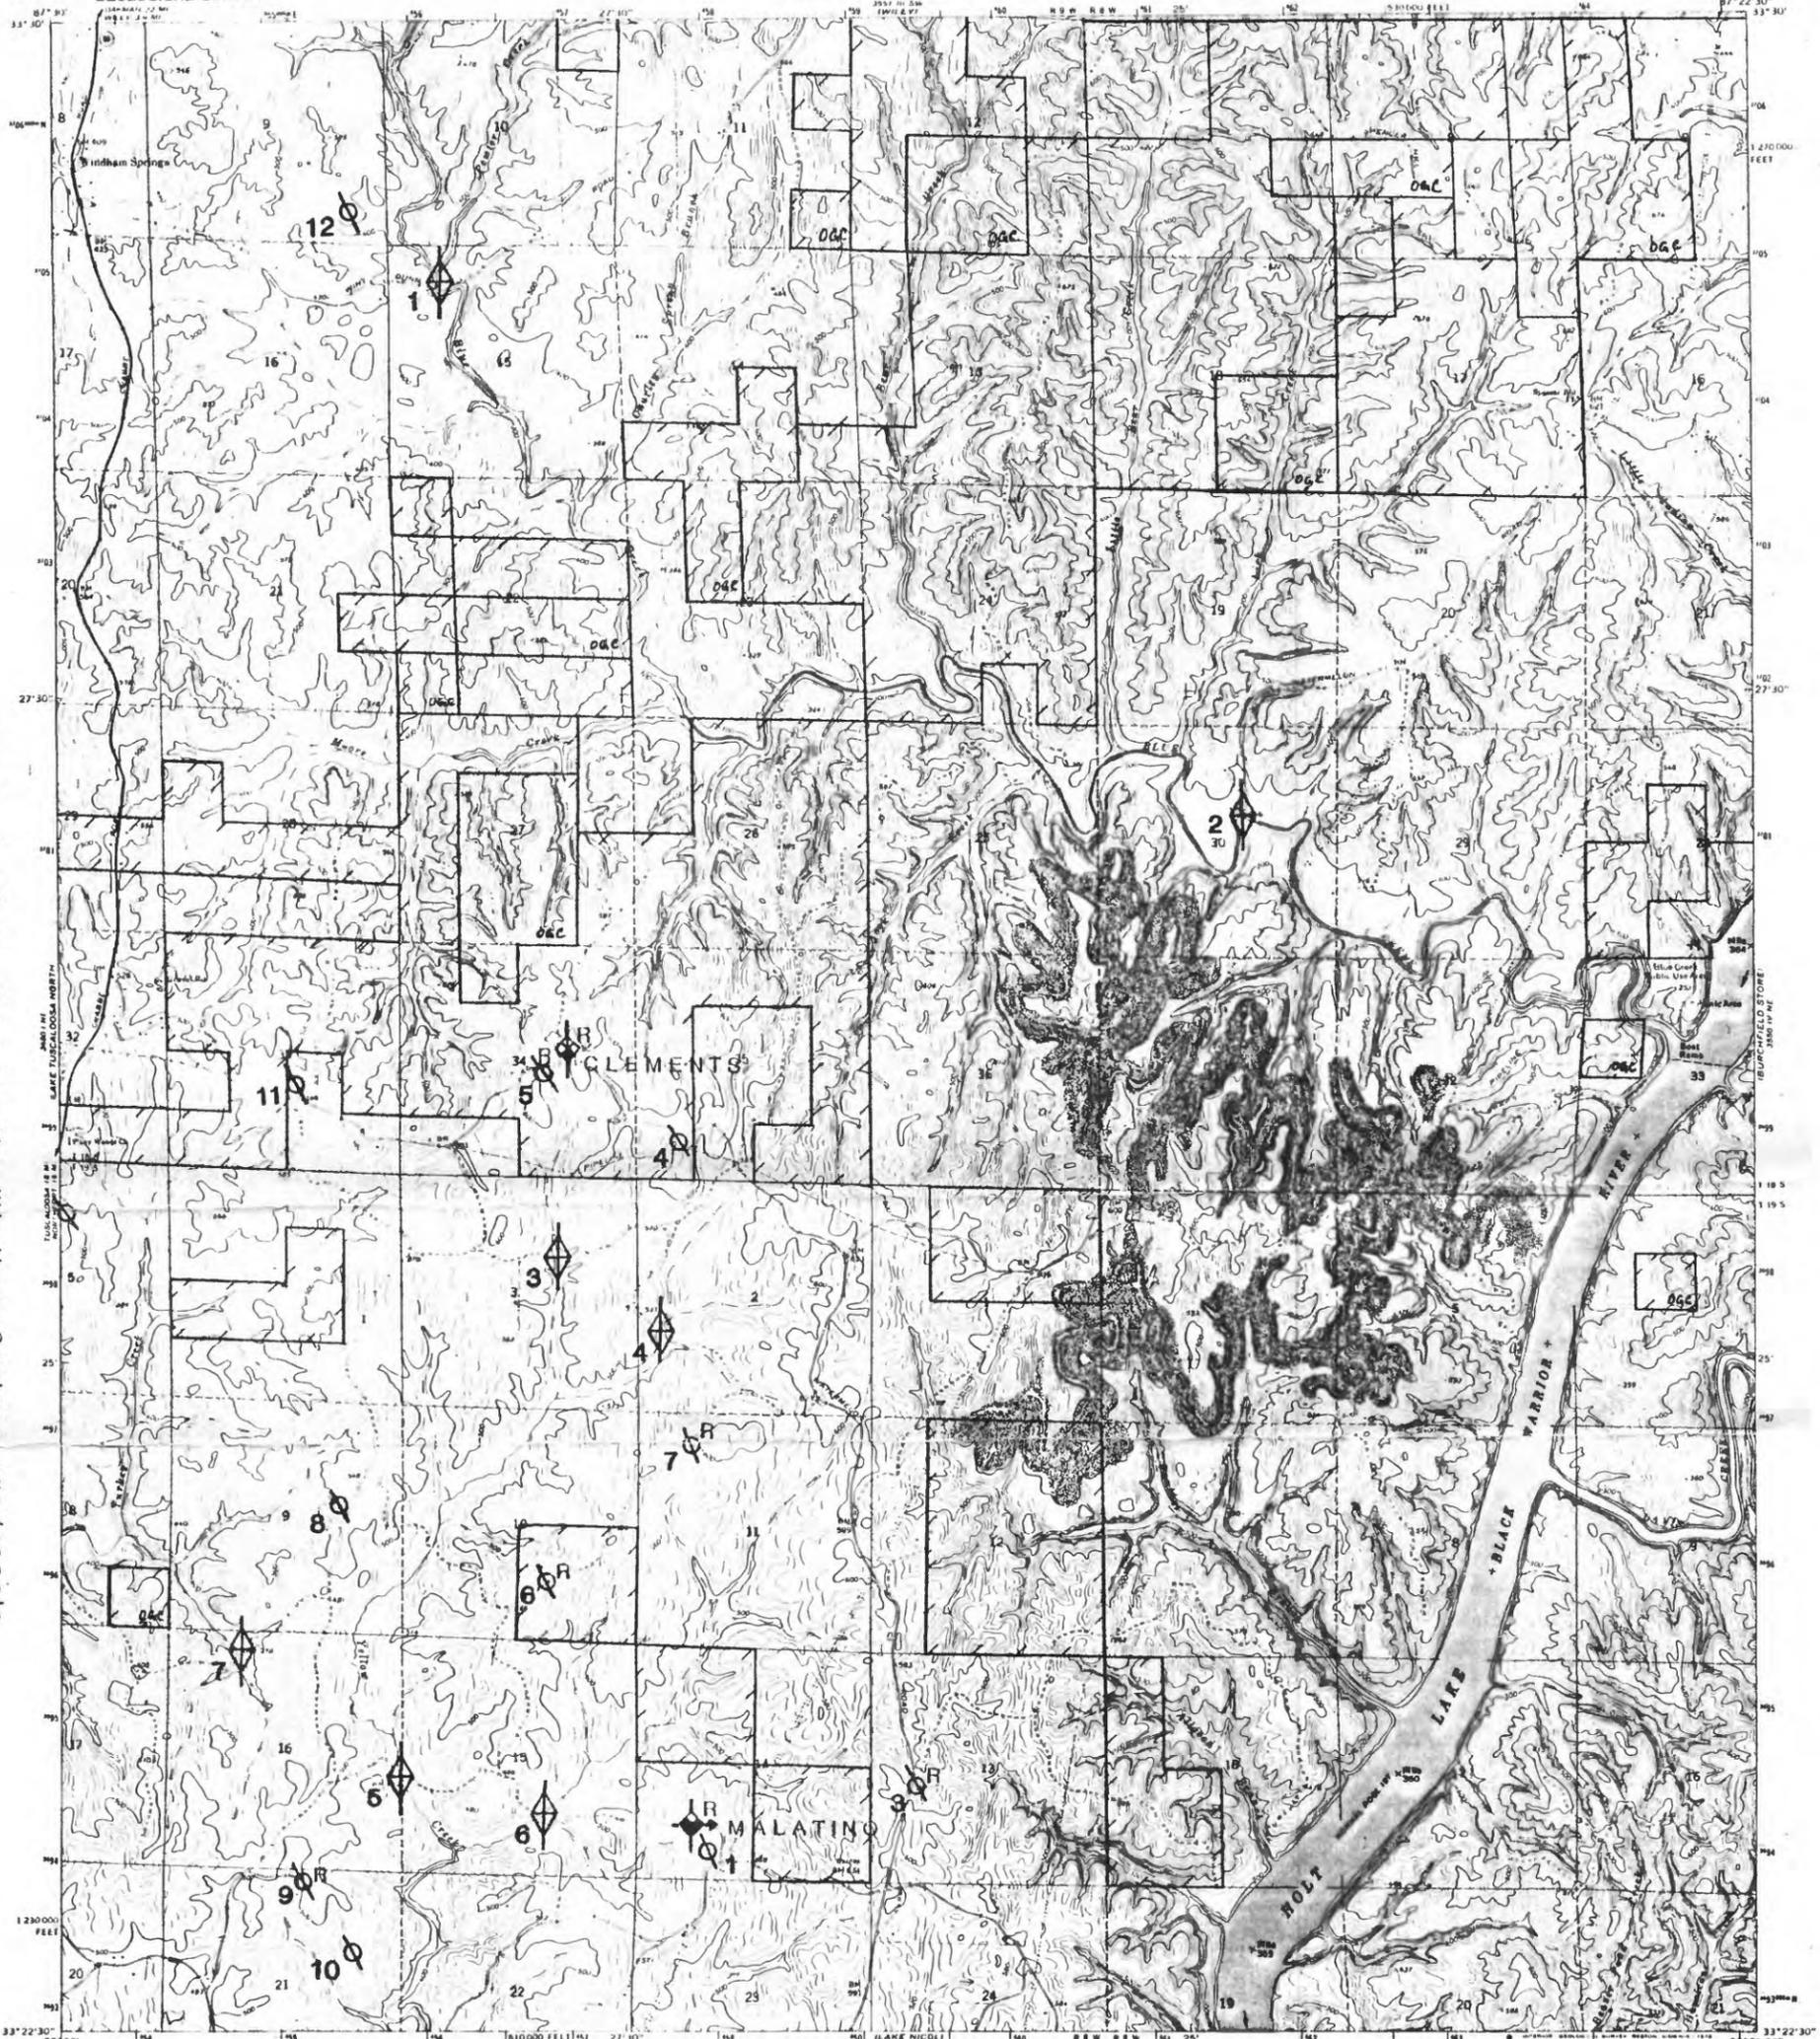

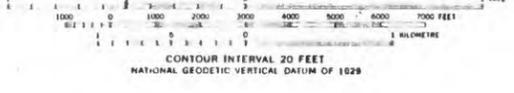

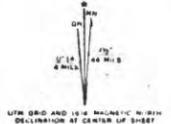

Figure 3.--Data sites for the Windham Springs quadrangle.

Mapped, edited, and published by the Geological Survey  
Control by USGS and NOS/NDA  
Topography by photogrammetric methods from aerial  
photographs taken 1974. Field checked 1974  
Projection and 10 000 foot grid ticks: Alabama coordinate  
system, west zone (Transverse Mercator)  
1000 metre Universal Transverse Mercator grid ticks,  
zone 16 shown in blue 1927 North American datum  
Fine red dashed lines indicate selected fence and field lines where  
generally visible on aerial photographs. This information is unchecked

ROAD CLASSIFICATION  
Primary highway: hard surface (solid line), light duty road, hard or improved surface (dashed line)  
Secondary highway: hard surface (dashed line), unimproved road (dotted line)  
Interstate Route (circle with 'I'), U S Route (square with 'U'), State Route (circle with 'S')

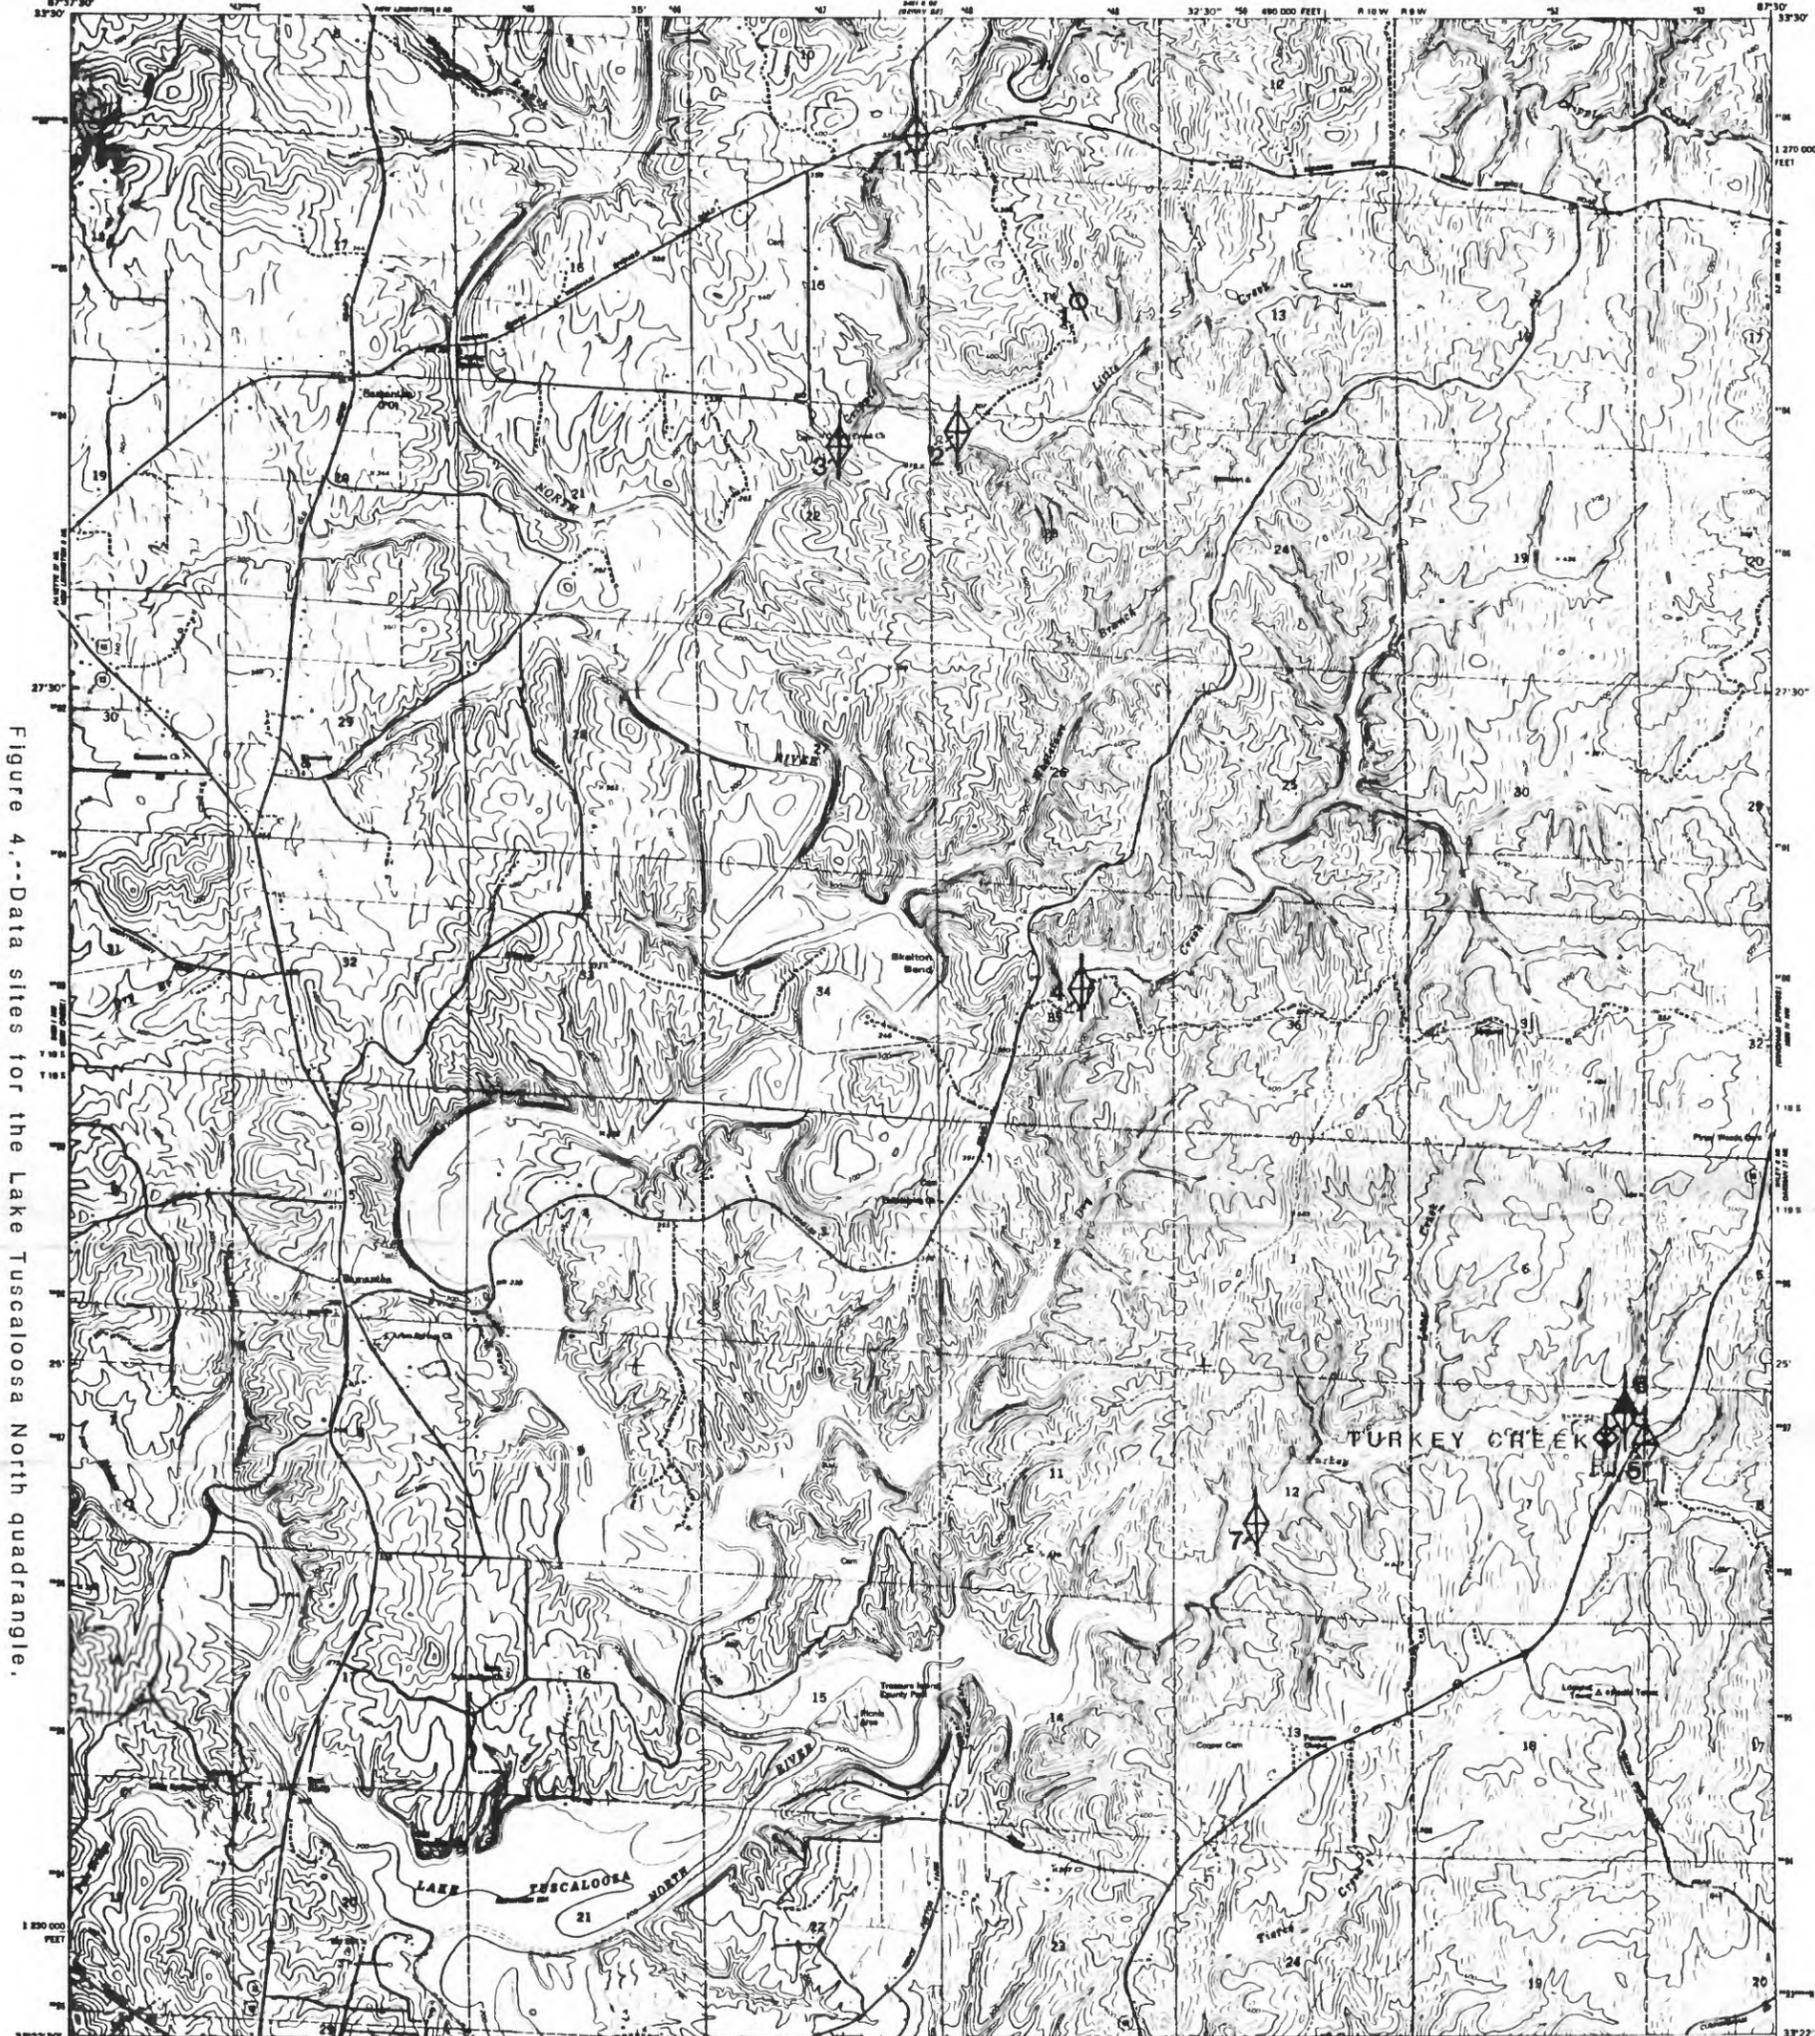

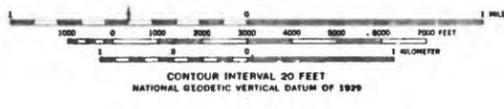

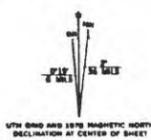

Figure 4.-Data sites for the Lake Tuscaloosa North quadrangle.

Mapped, edited, and published by the Geological Survey  
Control by USGS and NOS/NOAA  
Topography by photogrammetric methods from aerial photographs  
taken 1974. Field checked 1975. Map edited 1978  
Projection and 10,000-foot grid ticks. Alabama coordinate  
system, west zone (transverse Mercator)  
1000-meter Universal Transverse Mercator grid ticks,  
zone 18, shown in blue. 1927 North American datum  
Five not dashed lines indicate selected fences and field lines where  
generally visible on aerial photographs. This information is uncheckered

ROAD CLASSIFICATION

Primary highway hard surface	Light duty road, hard or improved surface
Secondary highway hard surface	Unimproved road
( ) Interstate Route	[ ] U S Route ( ) State Route
